

## GAS TANK

**Applicable Area :** Liquefied gas

**Application :** LGC (Liquid Gas Container) inventory management system

- The remaining amount and temperature in the LGC (ultra-low temperature Liquid Gas Container) are monitored by the DL8.
- When the remaining gas volume inside the LGC is low, an e-mail notification is sent to the management office of the relevant management company. Resupply before the gas runs out is thus made possible.
- The unified management of multiple LGCs is possible by regularly sending data from DL8 to the cloud server at the management office.
- An alarm output is generated and an alert e-mail is sent when the internal temperature of the container rises.
